Weed Wednesday: Pond Demo
* we used 6 different herbicides
- Copper Sulfate
- Clipper
- Imazypyr
- 2,4-D
- Stingray
- Glyphosate
* main issues in the pond are watershield, naiad, hydrilla, coontail, and filamentous algae (pics in comments)
*will check it every 1-2 weeks and rate it in one month

Weed Wednesday: Watershield Pond Demo Rating

Weed: watershield
Herbicide ratings:
2,4-D - 70-80%
Glyphosate - 80-90%
Stingray - 100%
Imazypyr - 20% (we didn't talk about it in video because it wasn't really effective)
Copper sulfate - 20%
Clipper - 0%

*Proper weed ID is critical
*Never treat more than 1/3 of a pond at a time and during the hottest parts of summer don't treat over 1/4 of your pond at a time
*Treating too much will initiate fish kill due to oxygen depletion as the herbicides start to kill the plants
*we will work on some cost analysis on the above herbicides and get back with you
